

## **DNX COMMUNITY**

The World's First Decentralised Autonomous Platform for Digital Nomads and the Global Remote Workforce that exists on the Blockchain.

*“The remote worker phenomenon has exploded in the last couple of years and this growth is expected to accelerate. We are set to see over a billion remote workers by 2035 ..”*

The Nomad Community is the world’s first Digital Nomad platform that is built inside the Ethereum Blockchain.

We have created a decentralised fully autonomous platform for the remote worker community. Building an economy that will disrupt an industry that is growing at a tremendous rate. We are providing a robust network on top of the Ethereum blockchain that lets everyone utilise the services and at the same time share in the growth of the underlying currency and economic model.

**- A COUNTRY AND ECONOMY ON THE INTERNET FOR DIGITAL NOMADS AND THE REMOTE WORKFORCE THAT LIVES ON THE BLOCKCHAIN -**

## INTRODUCTION

Have you ever found yourself reading a book or article or listening to a podcast about revolutionary new technologies such as Google and Facebook, and regretting not having had the opportunity to get involved in the early stages, when participating had a low barrier to entry?

The internet has made everything more accessible, including the ability to get involved with industry-disrupting technologies that you wouldn't normally have access to unless your roommate happened to be the world's next tech billionaire.

Today, there is a new opportunity to get involved with a similarly-radical revolution, centered on blockchain technology.

## ABSTRACT

The Nomad Community is an automated economy that lives inside the Ethereum Blockchain. Nomad Tokens are bought off the Nomad Smart Contract during the creation phase. A decentralised global ledger combined with a token that's required to use the ledger aligns incentives and creates intense product engagement. Our Network becomes more useful as more users join and demand for the token increases as a result, bringing expanded benefits to all.

## OUR VISION

Our vision is to create a sustainable decentralised platform for the remote worker community. Providing an extremely easy-to-use network on top of the Ethereum

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

blockchain that lets everyone utilise the services and at the same time share in the growth of the underlying currency model.

The Nomad Network will let organisations opt-in to it and use our services, and the services provided by the community. Our governance system will decide which services are provided, their cost, and other parameters.

> [MORE INFO](#) <

## THE BLOCKCHAIN

Blockchain technology creates a decentralised digital public record of transactions that is secure, anonymous, tamper proof & immutable.

Instead of a bank or other intermediary maintaining a private database of records, blockchain technology makes all records public.

> [MORE INFO](#) <

## THE PROBLEM

People the world over are opting for a new lifestyle that remodels their lives and allows them freedom of movement while building and running businesses, working as freelancers, or working for organisations remotely.

This is the Digital Nomad or Remote Worker movement.

This community is changing the global economy at an ever-increasing pace, and it is not slowing down. But they are faced with some unique challenges.

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

[hello@digitalnomad.community](mailto:hello@digitalnomad.community) | <https://digitalnomad.community>

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

They lose large parts of their income to expensive intermediaries, fluctuating exchange rates, and a lack of resources and a single unifying platform to help them attend to their unique needs as digital nomads and remote workers.

## OUR SOLUTION

We have created a decentralised autonomous organisation (Community), geared at providing a platform where Digital Nomads and Remote Workers can thrive and build successful businesses. Our platform is based on the Blockchain, and brings with it all the benefits of a technology set to radically change our world.

Our business model is based on this free-to-use platform being run on our own Nomad Coin (DNX - Digital Nomad Network Token) cryptocurrency, the very technology set to change the face of the modern economy and hailed by prominent investors like Tim Draper as the future of our monetary system.

Our currency is based inside the Ethereum Blockchain, so it's easy to get your money out when you need to, no questions asked, and no middlemen to take a percentage of money that you earned.

A few examples of the services offered inside the DNX Community:

- find work or search for freelancers;
- Upskill or present training courses.
- find a place to stay and work, book the best inexpensive flights;
- find a transport rental in your city;
- start your online shop in our own marketplace;
- promote your events, or join those of others;
- buy and sell tickets;

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

[hello@digitalnomad.community](mailto:hello@digitalnomad.community) | <https://digitalnomad.community>

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

- chat, meet, and share - there is even a dating site on the platform!

As a value-added benefit aimed at maximising our community offerings, every member of the Digital Nomad community will receive their own debit card, which is connected to their online Ethereum wallet. This means that they will be able to withdraw money all over the world without even using a bank account or incurring hefty international banking fees. This, in itself, is the single biggest problem digital nomads and remote workers are faced with. This is one major problem that Nomad Community aims to solve.

Thanks to the services on our Network being run on Nomad Coins (DNX) as opposed to fiat currency, every transaction performed on the Nomad Network strengthens our network and token. We are creating the world's first country and economy on the internet!

This can mean

- no exchange rate headaches
- no expensive intermediaries
- decentralised digital public records
- secure, anonymous, tamper proof & unchangeable transactions
- A self contained economy that cannot be influenced by external players

## CURRENCY AND ECONOMY

### NOMAD COIN

Our economy is underpinned by the NOMADCoin. An Ethereum based ERC20 Network Token, that facilitates all transactions inside the Network.

## DECENTRALIZED AUTONOMOUS PLATFORM FOR DIGITAL NOMADS

---

DNX aims to be traded on all major CryptoCurrency Exchanges, and our planned Nomad Debit Card will allow the Community to seamlessly transact in all major currencies worldwide, without the need for constant currency conversions. No more expensive exchange rates, no more waiting for your money. Efficient, convenient money that grows as the network evolves.

To break down DNX tokens, they too are multi-faceted in the sense that they represent 4 primary categories: property, utility, income/rewards and fungibility.

> [MORE INFO](#) <

- **Property:** DNX are an expression of IP inside a programmable token. The IP DNX represent is derived from the content and services provided inside the network.
- **Utility:** DNX is also a utility token in the sense that you need DNX to operate many of the services inside the ecosystem. Additionally, when Ethereum's protocol is upgraded to allow for tokens to be the gas that pushes transactions through the network, the DNX token will achieve further utility and greater value.
- **Income/Rewards:** DNX manage the flow of income and rewards generated through consumption and participation in the ecosystem that are distributed to token holders.
- **Fungibility:** The most known and understood attribute of DNX, is that they are fungible (i.e., participants can spend them on each other's services and to fund projects -- the foundational form of usefulness of DNX -- and prospectively, much more).

## THE NETWORK

### IDENTITY VERIFICATION, MANAGEMENT AND TRUST

The greatest obstacle for migrating many services online is the ability to secure the data and verify the identity of the users of that service. Currently, online authentication relies on a password or on rare occasions the use of dual-factor authentication.

The problem with these methods are that passwords are notoriously insecure and dual-factor authentication generally relies on sending a code over SMS or a third party service. The solution to this problem lies inside the blockchain.

Currently, the blockchain is used to handle the ledger for a \$10 billion dollar currency. However, the same cryptographic principles could be applied to authentication.

By distributing a ledger among all members of the network, blockchain authentication eliminates someone from maliciously altering the ledger. Every time a 'transaction' or block of data is added to the chain a majority of the network must verify its validity.

This guarantees the integrity of the ledger. Public key encryption is then used, such as the extremely secure RSA encryption, to securely send their credentials. The recipient verifies

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

[hello@digitalnomad.community](mailto:hello@digitalnomad.community) | <https://digitalnomad.community>

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

this against an entry in the immutable blockchain resulting in an incredibly secure and reliable way to handle verification of identity.

These principles could be applied to transition everything from the electoral process to state identification cards to dual-factor authentication into a secure, fast, reliable, and readily available service.

Blockchain ID's are a viable solution to solve the task of verifying a user is who they say they are. Furthermore, this functionality could be expanded to do a variety of secure data transfers on behalf of an individual. One service deeply linked with identity verification is the sharing of identity information without the disclosure of unnecessary information.

In addition to sharing data, a user could also add data to the chain as proof of a transaction, without giving away the original data of the transaction. Either party could verify a document against this entry and show that it is in fact valid, enabling fast and reliable audits of data. This methodology would be based on the principle of message signing and hashing. Many services already use this technology to securely verify data (such as JSON Web Tokens) while not disclosing the original data.

> [MORE INFO](#) <

### **SECURE MESSAGING AND COLLABORATION**

NomadCHAT is a messaging platform that overcomes traditional limitations related to identity, access control and verification, eliminates intermediaries and allows any party involved to collaborate with other elements on the network, providing security, speed, authenticity and verifiability.

Transfer any digital asset, send data and share information on the network quickly, efficiently and securely.

[hello@digitalnomad.community](mailto:hello@digitalnomad.community) | <https://digitalnomad.community>

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

> [MORE INFO](#) <

## REWARDS BASED PARTICIPATION

The Digital Nomad Network Token (DNX), or Nomad Coin, rewards network participation via static proof of stake. DNX rewards "organisational age" instead of "coin age," thus eliminating abuse from participants and users that do not actively contribute to the network.

By having a static reward system, the rewards for participation are proportional to the work every active member contributes. This discourages centralisation and promotes network growth and health.

> [MORE INFO](#) <

## CORE APPLICATIONS

### PROJECT CROWDSOURCING

When individuals are granted certain responsibilities or chunks of business, the blockchain determines which of those individuals are worthy of credit. The distribution system will only give credit if the solutions are correct and delivered on time, cutting down on wasted time and increasing the speed at which overall projects are completed.

This approach to group-based problem solving would be most applicable to computer programming and other technical fields, but success in those areas could lead to a more comprehensive use of the same system long-term.

### Smart Contracts

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

[hello@digitalnomad.community](mailto:hello@digitalnomad.community) | <https://digitalnomad.community>

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

Eliminating any type of broker inside the environment is what the blockchain and specifically smart contracts is all about. Our platform will constantly refine and evolve this methodology to provide the next generation of peer-to-peer collaboration.

## **Dispute Resolution**

Conflict resolution inside DNX is managed by smart contracts that ensures the participants are treated fairly on both sides throughout the process. A rewards-based independent collective will act as an escalation function if the situation does require any intervention.

## **Decentralisation**

Employing the Ethereum blockchain, we provide a decentralised marketplace for freelancers and employers to ensure a trust-less workflow and eliminate disputes around delivery, milestones and payments on the platform. An efficient automated, decentralised, smart contract enabled process.

> [MORE INFO](#) <

## **TRAVEL AND STAY**

Our Travel & Stay service will use the blockchain to create a faster and more flexible platform that will offer a host of ancillary services on top of our traditional offerings.

This will give our partners greater flexibility in the way they distribute their products and services and will allow them to offer additional services not currently available through traditional channels. This will include customer-specific bundles that include priority booking, loyalty incentives and additional services.

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

## ON-DEMAND LEARNING AND EDUCATION

A new system inside the Blockchain is proposed to record, house, curate, secure, and distribute evidence of learning. Nomad Learning Network, where every individual is a lifelong registrar.

Open Badges gather evidence for credentials, creating a tamper-proof system for storage and retrieval of achievements. The blockchain offers a way to deal with authentic accreditation, which allows the problems of openness, scale and cost for badges to disappear.

> [MORE INFO](#) <

## MULTI-VENDOR E-COMMERCE

For a Digital Nomad that wants to offer unique products that they come across their travels, it might not make sense to have to run, manage and maintain their own online shop. So we created a hassle-free multi-vendor platform to showcase, promote and sell products for Nomads. You simply add your products and watch your token balance increase.

> [MORE INFO](#) <

## EVENT MANAGEMENT

Our Event platform brings event management and ticket sales to the blockchain, with the aim of eliminating uncontrolled resale and counterfeit tickets. It allows event organisers to create, manage and promote their events and tickets at reduced costs, letting them set price controls and receive commissions on ticket resales.

[MORE INFO](#) | [OUR CORE TEAM](#) | [DISCUSSION](#) | [FAQ](#) | [PARTNERS](#)

[TWITTER](#) | [FACEBOOK](#) | [GOOGLE+](#) | [GITHUB](#) | [LINKEDIN GROUP](#) | [LI COMPANY](#)

It also gives ticket buyers rewards for promoting events, and identifying fraudulent activity. We aim to bring oversight and transparency to the event management and ticketing lifecycle, security to the transfer and validity of tickets, new revenue streams for event organisers and greater promotional capabilities.

## CONCLUSION

An opportunity exists for major disruption inside an industry set for explosive growth, that has little to no formal systems and structures defined.

**Our systems are existent and well developed**, which makes this project so unique. We aim to fast-track the finalisation of the remaining implementations and grow our organisation and ecosystem rapidly.

**This is the opportunity we've been waiting for, an opportunity we will not see again in our lifetimes.**

***"There will be 1 billion digital nomads by 2035" - [watch now](#)***

### [JOIN OUR TOKEN PRIVATE SALE](#)

*DNX are only being offered for access to the Digital Nomad Community network and affiliated services. Financial gains are not promised or guaranteed; nor is any promise made of DNX token exchange listing or convertibility. Token exchange facilities, if available, may be limited, and tokens are subject to high volatility. Tokens may lose value in the short or long term relative to other blockchain coins/tokens or national currencies. DNX tokens are only warranted for the use-functionality present at the time of purchase. We deem DNX tokens not to be securities according to U.S. and similar securities laws, but your local securities laws may dictate otherwise. We advise you to consult with a local securities attorney before buying.*
